What is Intellectual Property ?

⌘ Creations of the mind

- ☑ Inventions
- ☑ Literary and artistic works
- ☑ Symbols, names, and images used in commerce

⌘ 5 categories

- ☑ **Patents for inventions**
- ☑ Trademarks
- ☑ Industrial Designs
- ☑ Geographical Indications
- ☑ Copyright
 - ☒ Literary works: novels, poems, and plays
 - ☒ Films or Music
 - ☒ Artistic Works: Drawings, paintings, photographs, and sculptures
 - ☒ Architectural Designs

Intellectual Property Right

⌘ Intellectual Property Right: Allows creators, or owners, of patents, trademarks, or copyrighted works to benefit from their own works or investment in creation

⌘ History

- ☒ 1883: (_____) Convention for the **Protection of Industrial Property**
- ☒ 1888: (_____) Convention for the **Protection of Literary and Artistic Works**
- ☒ 1948: Universal Declaration of (_____) Article 27: “**Right to benefit from the protection of moral and material interests resulting from authorship of scientific, literary or artistic productions.**”
- ☒ 1976: U.S. Copyright Act (**U.S. adoption of Berne Convention**)

- **Albert Einstein** (1879–1955) – worked out his **theory of relativity** while living in Bern, employed as a **patent examiner** at the **patent office**

Relief representing the United States Patent Office at the Herbert C. Hoover Building.

Why promote and protect intellectual property?

- ☒ 1. The progress and well-being of humanity rest on its capacity to
 - ☒ create and invent new works in the areas of technology and culture.
- ☒ 2. The legal protection of new creations
 - ☒ encourages the commitment of additional resources for further innovation.
- ☒ 3. The promotion and protection of intellectual property
 - ☒ spurs economic growth,
 - ☒ creates new jobs and industries, and
 - ☒ enhances the quality and enjoyment of life.

What is a Patent?

⌘ A patent

- ⊞ an **exclusive right** granted for an invention – a **product** or **process** that provides a **new** way of doing something, or that offers a **new** technical solution to a problem.
- ⊞ provides patent owners with **protection** for their inventions, granted for a **limited period**, generally **20** years.

⌘ Patent Types

- ⊞ **Utility Patents** – new and useful product/process
- ⊞ **Design Patents** – new design for an article of manufacture
- ⊞ **Plant Patents** – production of any distinct and new variety of plant

⌘ What kind of protection?

- ⊞ Patent cannot be **commercially made, used, distributed or sold** without the patent owner's consent.
- ⊞ Patent rights, **enforced in courts** that hold the authority to stop patent **infringement**.

What is a Patent?

⌘ Patent Filing

⏏ Provisional

⏏ Non-Provisional

⌘ How is a patent granted?

⏏ 1 File a patent application.

⏏ Content of the application

⊗ Title of the invention, as well as an indication of its Technical Field.

⊗ Background and a description of the invention, in clear language and enough detail that “an individual with an average understanding of the field could use or reproduce the invention.”

⊗ Visual materials – drawings, plans or diagrams – that describe the invention in greater detail.

⊗ “claims”, that is, information to help determine the extent of protection to be granted by the patent.

⏏ 2 Application Publication by USPTO

⏏ 3 Examination by Patent Examiners

⌘ What can/cannot be Patented

☒ Usefulness

- ☒ The subject matter has a useful purpose and also includes operative-ness. (a machine which will not operate to perform the intended purpose would not be called useful, and therefore would not be granted a patent)
- ☒ The laws of nature, physical phenomena, and abstract ideas are **not patentable** subject matter.
- ☒ A patent **cannot** be obtained upon a **mere idea or suggestion**. A complete **description of the actual machine** or other subject matter is required.

☒ Non-Obviousness (“If someone of ordinary skill in a relevant field could easily make the invention, then it is considered obvious and would be an invention based on **prior art.**”)

☒ Novelty – next page

⌘ Novelty conditions for Obtaining a Patent

⏏ Must be **new**.

⏏ An invention **cannot be patented if:**

⏏ (1)“ the claimed invention was patented, described in a printed publication, or in public use or on sale,

⏏ (2) the claimed invention was described in a patent issued [by the U.S.] or in an application for patent published or deemed published [by the U.S.]”

⏏ The claimed invention was available to the public via, for example,

- an oral presentation at a scientific meeting,
- a demonstration at a trade show,
- a lecture or speech,
- a statement made on a radio talk show,
- a YouTube™ video, or
- a website or other on-line material.

U.S. Patent Litigation cases filed

Q9 – What is an application program interface (API)?

At restaurants, you order food (call API) from the menu (APIs). Once your food is ready (API response is ready), the waiter will serve you the food.

The basic idea is: you ask for what you want and the system returns you a response, without exposing what's happening behind the scene.

Technical Summary

Python (programming language)

From Wikipedia, the free encyclopedia

Python is an interpreted, high-level and general-purpose programming language. Created by Guido van Rossum and first released in 1991, Python's design philosophy emphasizes code readability with its notable use of significant whitespace. Its language constructs and object-oriented approach aim to help programmers write clear, logical code for small and large-scale projects.^[28]

Python is dynamically typed and garbage-collected. It supports multiple programming paradigms, including structured (particularly, procedural), object-oriented, and functional programming. Python is often described as a "batteries included" language due to its comprehensive standard library.^[29]

a Layman Summary

⌘ What is Python?

- ⌘ Python is a totally free language to download, use and play with, that's because a bunch of crazy volunteers who devote their time to improving the language (much like Wikipedia). The commands (that's the code you write) are mostly in normal English, so if you want to tell the computer to write something you type `print "something"` and run the program. In fact Python is one of Google's preferred languages, and they build a lot of their products with Python. A Google employee who turned me onto Python said I could become "reasonably proficient in it in less than two months", you wouldn't say that about learning French. Python can be used for small, large, online and offline projects. It's versatile, get it?

10 Non Techie Reasons Why I Learned Python And You Should Too
